

Press Release

Consensus Consulting and Thamesbridge Announce Foundation SecurITy Suite

***New services focussed on managing data security and assessing
risks to business continuity***

Cambridge, February 28, 2006 – Consensus Consulting in partnership with Thamesbridge UK Ltd, a high-tech security company whose background and specialist skills are in the areas of investigations, digital evidence and computer forensics and risk assessment, announce the availability of the Foundation SecurITy suite. These services are part of the continuing strategy to enhance the company’s business service offerings to meet customers demand for partners that can provide strategic assistance coupled to technology implementation capabilities.

The Consensus Consulting Foundation™ SecurITy suite of services are aimed at providing solutions that ensure that security issues can be identified, any exposures fully assessed and documented, and clients provided with further exhaustive penetration testing to ensure future threat management controls and procedures are in place.

Peter Quintana, Partner responsible for Applications Systems and Provisioning at ClarityBlue commented, “We need specialist third party support in the area of security to ensure we stay up with the game. I have been impressed with the depth and breadth of knowledge Consensus Consulting brings”.

“This announcement is significant in extending our capabilities in conjunction with Thamesbridge, to provide services aimed at handling the continuing and escalating threats to business data and the ability of a company to survive such treats”, said Alan Henderson CEO of Consensus Consulting, “Our industry expertise allows companies to protect their data necessary for both continuance and the ongoing ability to compete in the global marketplace.”

Computer Forensic Services

With Computer Forensics services, we are able to perform computer image acquisition both at the client's premises using our portable evidence recovery equipment and also back in our lab. As with any evidence it is vital that nothing is changed, and all information on the computer remains in its original state.

Data is acquired and analysed using EnCase, which is an industry standard and accepted in a court or law as evidence.

Penetration Testing Services

Hacking is a common occurrence nowadays and increasingly attacks are performed as part of a hostile intelligence program to gain competitive information from a business. As part of the SecurITy suite, Consensus Consulting will perform a threat assessment of an attack against a Client's IT infrastructure using the hacking procedures utilised by professional hackers. The output consists of a management summary providing a risk matrix and assessment in simple terms and the technical information to understand any vulnerability found and how to resolve them.

Risk Assessment Services

The Risk Assessment service is designed to assist companies in evaluating the internal and external threats to client's business assets and then provide recommendations on how to counter or reduce any risk identified.

About Consensus Consulting

Consensus Consulting is known for providing effective business focused solutions that unlock the potential of their customers IT investment. Providing business and technology insight to clients, their consultants act as a catalyst to ensure that their IT technology foundation is able to meet future challenges - enabling them to become an Adaptive Enterprise
