

**Thamesbridge**

Consensus Consulting uses a Project Office approach with industry standard tools and methodologies to deliver timely solutions to complex, technical problems

# Consensus Foundation Managed Services

## Foundation SecurITy Suite

### Who We Are

We are known for providing effective business focused solutions that unlock the potential of our customers IT investment. Providing business and technology insight to clients, our consultants act as a catalyst to ensure that their IT technology foundation is able to meet future challenges - enabling them to become an Adaptive Enterprise

### What We Do

For organisations undergoing significant change, we offer a team of trusted, skilled, and passionate consultants; proven methodologies; and solution innovation to consult, design, build, manage and maintain new or enhanced IT infrastructures in support of business initiatives. Our engagements result in reduced time to market, reduced risk, and reduced cost.

### Managed Services

Consensus Consulting is able to provide both management and technical resources to support a clients IT Support Services allowing the client to focus on their core activities. Resources can be part of the clients project team working in specific areas of responsibility or directly manage the project and clients staff.

### Foundation SecurITy Suite - Overview

Foundation SecurITy Suite comprises services that look at today's IT issues which threaten the ability for a business to manage data security and withstand threats to business continuity.

In conjunction with our partner Thamesbridge, Consensus Consulting is able to provide offerings to clients tackling four key areas for fraud and threats to security.

- **Computer Forensics**, an investigation of a computer whereby data is examined for any material relating to a disciplinary act, criminal act or crime.
- **Penetration Testing**, performing a threat assessment of an attack against the existing IT infrastructure.
- **Risk Assessment** designed to assist a company in evaluating the risk to business continuity and the necessary security and recovery procedure to maintain effectiveness.
- **Internet Data Mining**, a dedicated search process providing accurate information on unauthorised or illegal sales and distribution of products.

## Computer Forensics

With Computer Forensics services, we are able to perform computer image acquisition both at the clients premises using our portable evidence recovery equipment and also back in our lab.

As with any evidence it is vital that nothing is changed, and all information on the computer remains in its original state.

Data is acquired and analysed using EnCase, which is an industry standard and accepted in a court or law as evidence.

This captured image contains all operating system and application software, configuration and all files.

We are thus able to investigate the image, isolating any relevant information, without any risk of compromising the original computer evidence.

The meticulously documented evidence is fully auditable so that events can be recreated in accordance with the ACPO guidelines (Association of Chief Police Officers)

## Penetration Testing

Hacking is a common occurrence nowadays and increasingly attacks are performed as part of a hostile intelligence program to gain competitive information from a business.

At project commencement, we define and agree the scope of work and level of exploitation and then we will perform a threat assessment of an attack against your IT infrastructure by using the hacking procedures utilised by professional hackers.

The results are provided in a single report that is in two parts. The first part is the management summary providing a risk matrix and assessment in simple terms. The second part is the technical information required by your IT staff to understand any vulnerabilities found and how to resolve them.

## Risk Assessment

Your valuable business assets are potentially under internal and external threats and many Companies undervalue their business assets, whether that is computer data, possibly in the form of client contact lists, or staff who feel insecure or under valued.

How do you assess the risk and therefore implement the correct security and recovery procedures?

Our Risk Assessment service is designed to assist companies in evaluating that risk and provide recommendations on how to counter or reduce any risk identified.

The Assessment is modular and each module can be undertaken individually or pertinent modules selected which fit the client's needs to meet their Internal and External threat requirements.

## Internet Data Mining

This service provides a dedicated search process enabling us to provide our clients with positive intelligence about their products or information currently on offer on the Internet. This provides our clients with up to date information on the unauthorised and unlawful sales and distribution of their product.

## "We are the Catalysts for Positive Change."

Focused at the board level, our industry expertise allows companies to realise the potential of information in their organisations. Consultants working with key executives carry out evaluations that will directly affect the way in which you deliver new or improved products to your customers whilst maintaining control over costs. Recommendations span from strategy to architecture and design. Consensus can also manage any programme and project requirements arising from the recommendations and resource technical implementations.

What makes us different from other consultancies is that we do not only talk and advise - we actually provide project management and people that deliver the solution. We have an impressive track record of the successful delivery of solutions to complex technical problems. We commit to long-term relationships with our customers.

Consensus Consulting offerings Consensus Insight<sup>SM</sup>, Consensus Catalyst<sup>SM</sup> and Consensus Foundation<sup>SM</sup> Services are aimed at providing solutions that ensure technical implementations fully support a client's business strategy.
